ZENTECH and Wrench Solutions form Strategic Partnership to Digitally Transform Capital Project Execution

Houston, Texas 05/6/2024 – ZENTECH and Wrench Solutions are pleased to announce a strategic partnership aimed at digitally transforming project management processes across the industry. This collaboration brings together the expertise of ZENTECH, a leading provider of engineering, procurement, and construction services, and the leaders in integrated project monitoring and control system (PMIS) and EDMS System, Wrench Solutions.

This partnership marks a significant milestone in the realm of Digital transformation of capital project management, as it combines ZENTECH's extensive experience in delivering

large-scale projects with Wrench's cutting-edge software solutions. By leveraging their respective strengths, the two companies seek to streamline project workflows, enhance efficiency, and optimize project performance from inception to completion, all with its AI powered advisors.

With the integration of Wrench Solutions' SmartProject software solutions, driven by artificial intelligence, into ZENTECH's project management processes, clients can anticipate heightened project visibility, improved cost control, and enhanced risk management. The advanced AI-driven features provided by the software, including real-time reporting, predictive analytics, and forecasting capabilities, will empower project teams to make data-driven decisions and proactively address potential challenges.

"We are excited to embark on this strategic partnership with Wrench Solutions," said Ramesh Maini, CEO at ZENTECH. "By amalgamating our expertise in EPC services with their state-of-the-art AI-powered software solutions, we are poised to revolutionize project management practices and deliver greater value to our clients."

Similarly, Wrench Solutions expresses enthusiasm about the collaboration. "Partnering with ZENTECH aligns perfectly with our mission to empower organizations with two decades experience in successfully implementing Integrated project management in 35+ countries that is needed to succeed in their projects," said Varghese Daniel, CEO at Wrench Solutions. "This partnership presents an outstanding opportunity to highlight our AI powered solutions and demonstrate how we can digitize and optimize project delivery, ensuring timeliness and adherence to budget constraints."

Wrench Solutions was founded in 1994, a time when 'Information Technology' mostly encompassed CAD, email, MS Office, Novell network, and little else. Recent mechanical engineering graduates, Varghese Daniel and Aju Peter, conceived the idea of enhancing the manufacturing design process using a unique form of Information Technology. However, since such technology didn't exist yet, they took it upon themselves to build it, thus establishing the foundation of what would later become Wrench Solutions. In 2005, Wrench identified a similar challenge in the Energy industry, where reliance on manual processes led to project delays and cost overruns. Leveraging their profound knowledge of manufacturing, Wrench designed a product tailored for the Engineering & Construction sector. Over the years, Wrench expanded its footprint and setup 6 subsidiaries globally, building partnerships with esteemed clients such as AECOM, L&T, WSP, EXP, TOYO Engineering, Tata Group, Enerflex, CBRE, AM/NS, Abu Dhabi Port, Reliance, Wabag, Mitsubishi, and many others. In 2013, Wrench established its presence in the United States, with an office in Houston TX and Toronto Canada, to cater to North and South American clients. In 2015, Wrench introduced SmartProject, a comprehensive, integrated, cloud-based system designed to cover the entire project cycle, from engineering and procurement to construction. Today, SmartProject is deployed on over 10,000 projects across 35 countries, helping organizations achieve their project management goals seamlessly.

Zentech Inc. 14800 St. Mary's Lane, Ste 270,
Houston, Texas 77079, United States of America

Zentech Incorporated is a Houston, Texas based marine engineering, project and construction management and naval architecture firm specializing in offshore oil and gas and renewable energy industries. Over forty-five (45) years of experience providing innovative engineering solutions employing a professional staff spread over six (6) international locations. Zentech's expertise encompasses Jack-up drilling units, dynamically positioned semi-submersibles, drill-ships, modular platform drilling rigs, barge rigs, fixed offshore platforms, floating production systems, including reactivation and conversion of existing rigs, EPIC contracts for MOPU conversions, and risers and pipelines. Zentech has been involved in several other unique projects, with specialized expertise. Zentech expertise includes predictive analytics of major drilling equipment, virtual reality, augmented reality, extended reality, virtual capture, or terrestrial laser (LiDAR) scanning, and unmanned inspection using UAV drones inside tanks, chimneys, large oil tanks, and other areas not easily accessible to humans.
